COVID-19 Patient Testing Workflows –
SCCA South Lake Union Clinic

Overview

Due to construction of the new clinic building on the South Lake Union campus, the centralized COVID-19 testing site located in G-1006/1008 will close end of day Tuesday, June 14, 2022, and new workflows for patient testing will begin on June 15. Detailed information for new workflows can be found within this document.

If you encounter any issues with a new testing workflow, please enter a Patient Safety Net report.

Patient Talking Points

When talking to patients about this change, it’s important to let them know that although we will continue to offer testing, they should seek testing through widely available free community testing locations as soon as they start to experience symptoms.

Patient talking points:

- If you are experiencing symptoms of COVID-19 or a respiratory virus – including common allergy symptoms – please let your care team know before coming to your appointment.
- We advise you to visit the Washington State Department of Health website to locate a free and conveniently located testing center: https://doh.wa.gov/emergencies/COVID-19/testing-COVID-19/testing-locations (Google search “WADOH COVID-19 test”).
- If needed, we can provide testing at the time of your appointment or procedure, if you are experiencing symptoms. Please let the front entry screeners know that you are experiencing symptoms, and they will provide you a handout with instructions for testing.
- Use as appropriate: A telehealth option may be available – if you are interested in that, please let your care team know.
- If needed: The previous testing location closed due to construction of our new clinic building.

Other Information and Resources

- Respiratory Virus Testing

Last updated: June 6, 2022
Version 1
Scheduling for Pre-Admission, Pre-Procedure, Pre-PFT, Pre-Surgery and BMT LTFU

**Pre-Admission**

COVID-19 testing is no longer required pre-hospital admission, however the patient will still be tested on the day of admission at UWMC or SCCA Hospital.

If a provider specifically requires a separate pre-admission test, they can be scheduled as a standalone test in the outpatient clinic prior to admission. The clinic team should have verbal or available documentation for the inpatient team to hold chemotherapy until COVID-19 testing results are available.

**Pre-Procedure**

Patients are encouraged to get tested in the community. If a patient is unable to get tested in the community, they are instructed to call 206.606.1434 to schedule a test. Appointments are available in the Procedure Suite, Monday – Friday from 3:30 – 5 p.m. If patient has a clinic or infusion visit within that timeframe, a COVID-19 test can be added to Epic notes and completed at that appointment. If testing is needed on the weekend, schedule in Alliance lab after 3 p.m. on Saturday – Sunday.

**Pre-Pulmonary Function Testing**

Schedule in Alliance Lab after 3 p.m. Monday – Sunday.

**Pre-Surgery**

Standalone testing in LPN injection clinic, no time restriction. Can be scheduled as an overbook with the MAs to support.

The patient can also be encouraged to have testing done at UWMC – Northwest but not the non-UWMC community sites as the test result must be available in Epic for surgeons to review. Testing done at King County public health sites (though operated by UW Virology labs) do not yield results in Epic. If the patient has another clinic or infusion visit within the needed timeframe, a COVID-19 test can be added to the existing appointment.

**BMT LTFU**

Patients are encouraged to get tested in the community. If there is not an option for community testing, schedule a test with the BMT triage RN on weekends, or the MA on weekdays. If the patient is doing a fasting blood draw after 3 p.m., the COVID-19 test can be scheduled with the Alliance Lab.
